

GRIP 10

Dimensions

The new GRIP plastic grouped supports are suitable for mounting installation cables. Besides the known advantages of cable ties, they have special features which considerably simplify mounting:

The separately moulded fastening element means that installation under the ceiling or on the wall are child's play. No matter whether it is with gas pressure nail guns, with knock-in anchors or the conventional method using bolts and anchors – the fastening options are wide-ranging. By locking the cable tidy on the fastening element there is no need for lengthy messing about with hammers and/or screwdrivers in the interior of the bracket. In addition, the cable ties can be interconnected or arranged back to back. This saves additional drilling and the system can be expanded at any time.

In addition, the Grip cable ties are available in a hardly flammable version.

The Grip cable ties will support you in a proper and safe installation of installation cables, even under difficult circumstances.
